CampusRide

Website User Manual

A step-by-step guide to creating an account, requesting rides, offering rides, reviewing trips, and using the main website sections.

Interface illustrations in this manual are simplified guides based on the available CampusRide HTML prototype. Your exact screen may vary slightly.

Version: Prepared for the CampusRide HTML prototype
Theme: Rider green accents; Partner orange accents

1. About CampusRide

CampusRide is a student mobility website prototype intended to help students request rides, offer rides to other students, and review ride-related information in one place. The site navigation includes Overview, Partner, Rider, My trips, Payments, Maps & Location, and My profile.

Before you begin

• Open the website in a modern browser.
• Keep your student USN and college email details available when creating an account.
• Use accurate contact and trip information.
• This manual describes the supplied HTML prototype; some features may depend on local browser data or may require a backend to work across multiple devices.

2. Log in or create an account

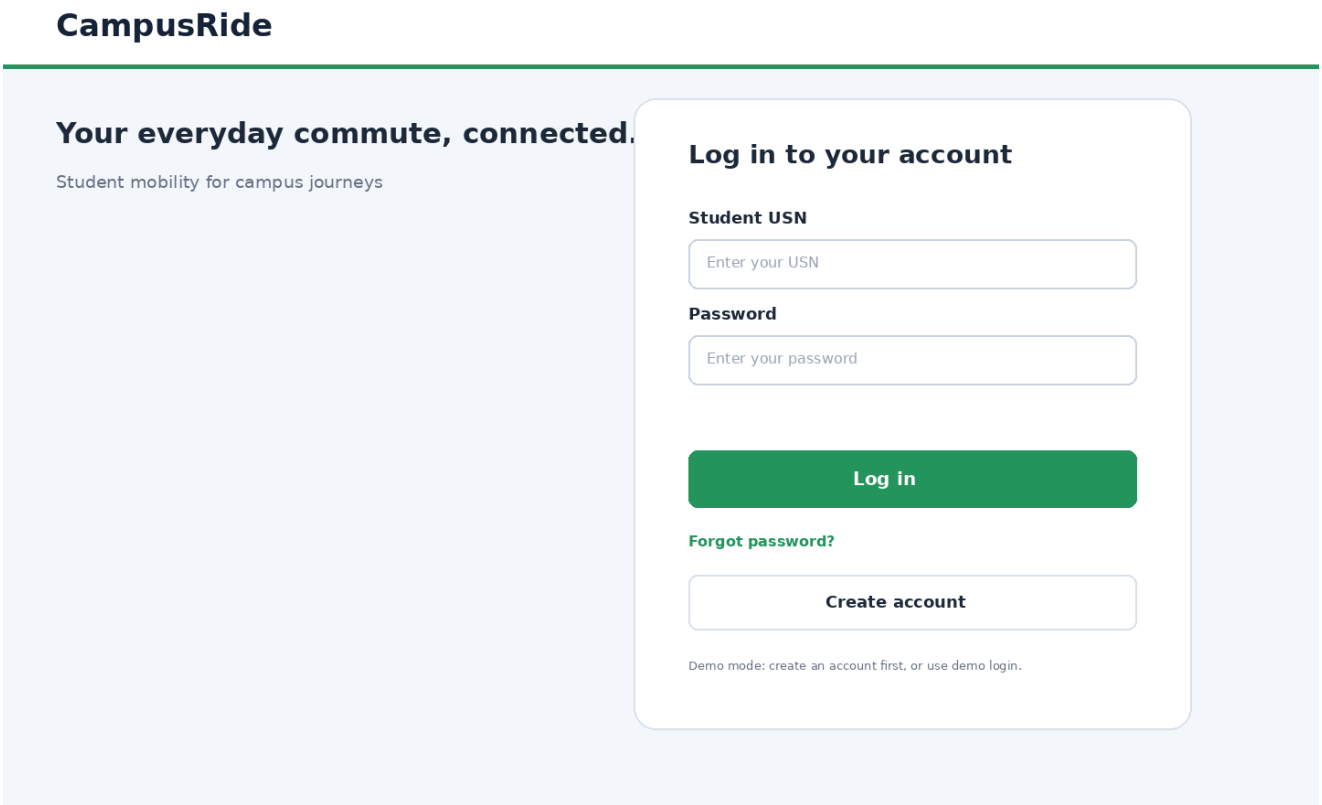

Figure 1. Login and account entry screen (illustrative guide).

To log in

1. Open the CampusRide website.
2. Enter your Student USN.
3. Enter your password.
4. Select **Log in**.
5. If the login fails, check the USN and password and try again.

To create an account

1. Select **Create account** on the login screen.
2. Fill in the requested details, including full name, Student USN, password, 10-digit phone number, college email

ID, department/course, and year.
3. Review the details for typing errors.
4. Submit the form and follow any confirmation shown by the website.

Forgot password? Use the Forgot password option if it is available in your version. Follow the on-screen instructions. Password reset by OTP requires the relevant backend/email or SMS integration to be configured.

3. Navigate the dashboard

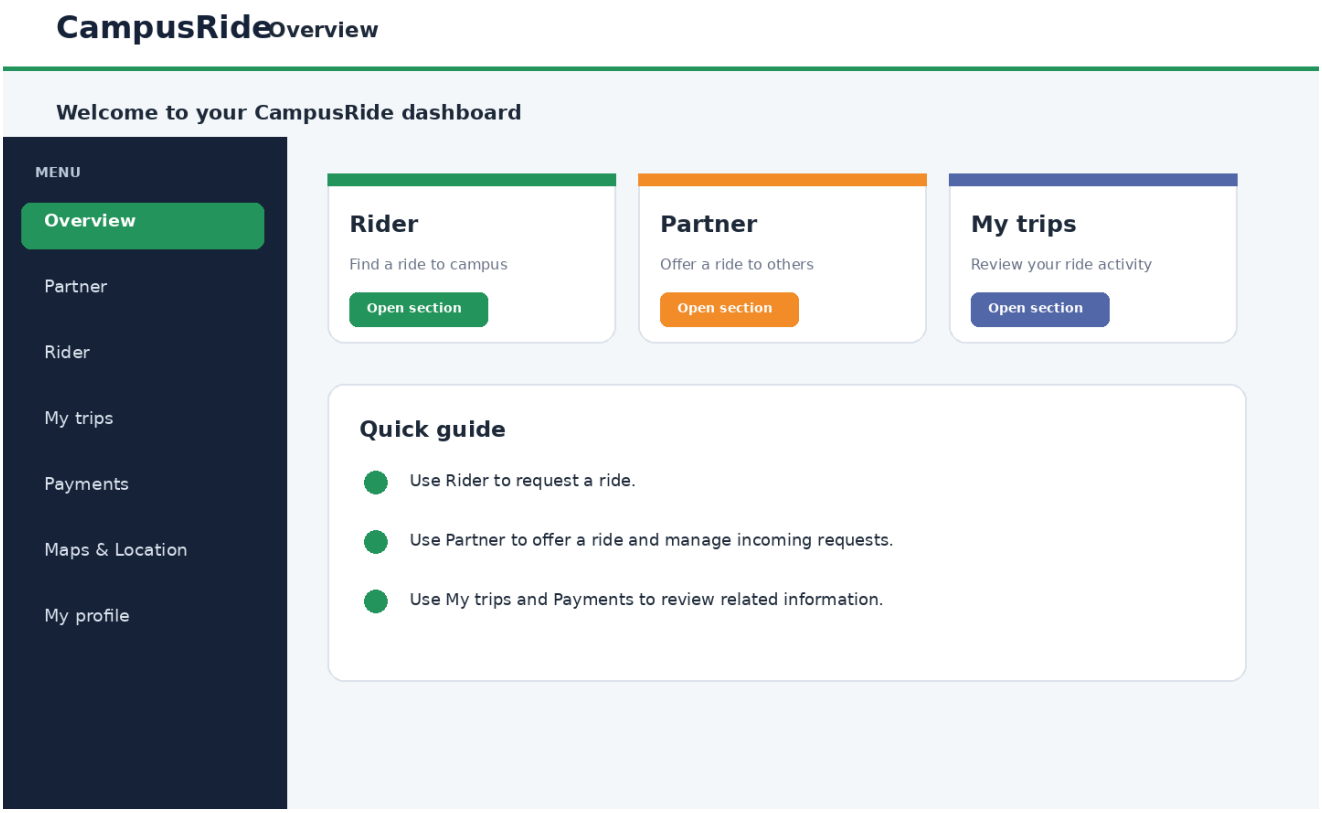

Figure 2. Main navigation and overview (illustrative guide).

After logging in, use the navigation menu to open the section you need:

Overview: Main landing area and quick access to the site's functions.
Rider: Find or request a ride.
Partner: Offer a ride and review incoming requests.
My trips: Review your ride activity, where supported.
Payments: View payment-related information available in the prototype.
Maps & Location: Use location/map features if configured and permitted by your browser.
My profile: Review or update profile/security options available in your version.

4. Request a ride (Rider page)

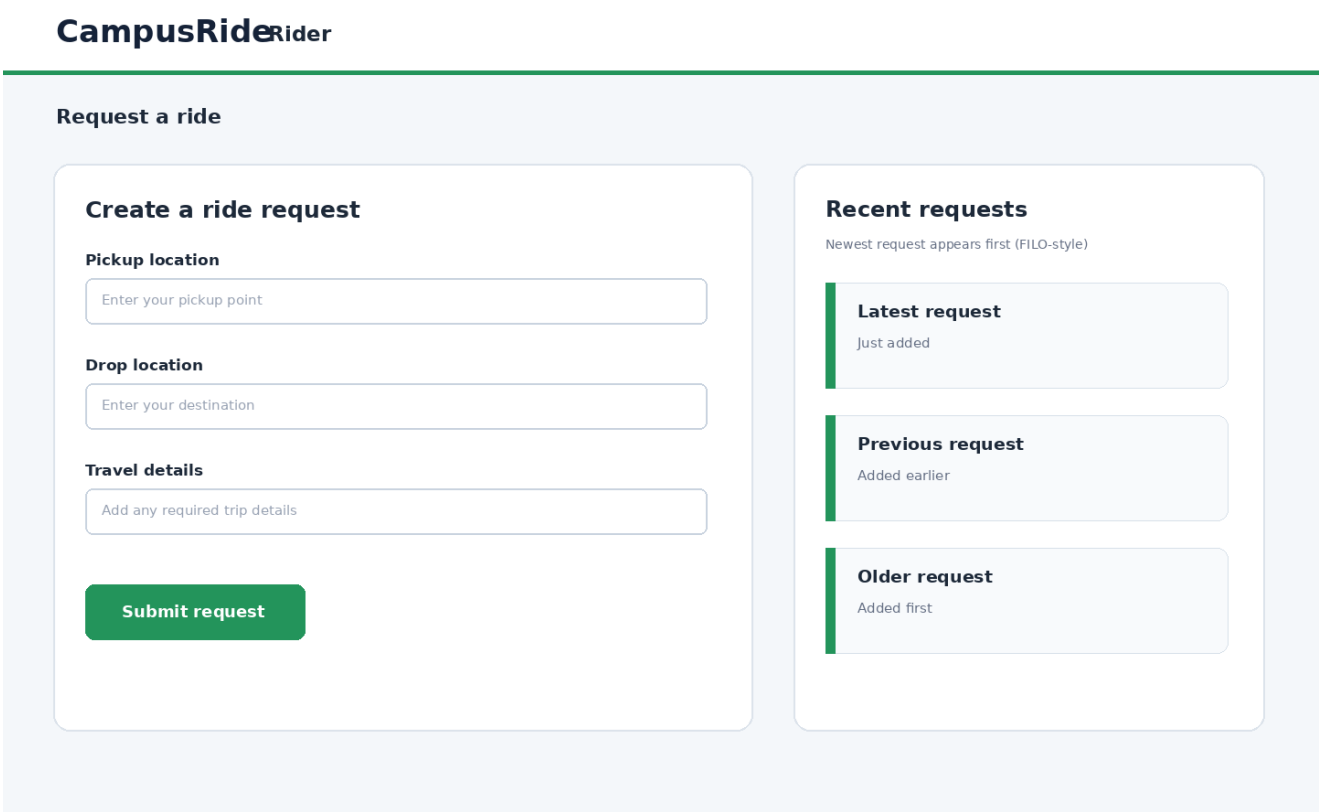

Figure 3. Rider request form and newest-first request list (illustrative guide).

1. Open **Rider** from the navigation menu.
2. Enter your pickup location and destination.
3. Complete any other trip details requested on the page.
4. Review the information for accuracy.
5. Select the submit/request button.
6. Check the request list or status area for the new entry.

Request order (FILO-style): The newest request is intended to appear at the top, with older requests below it. FILO means “First In, Last Out”; in a stack, the last item added is the first item seen or removed. If a request does not appear, refresh the page and confirm the request was submitted successfully.

5. Offer a ride (Partner page)

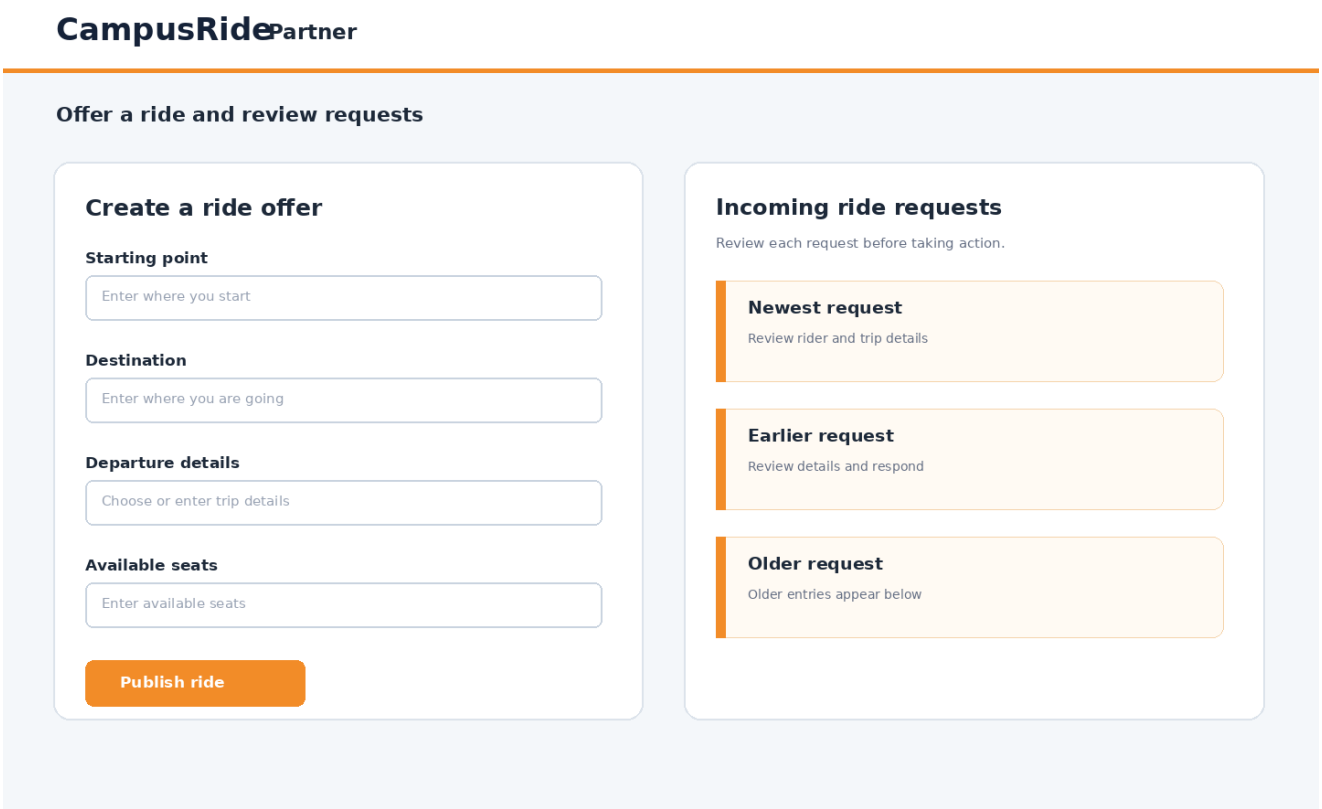

Figure 4. Partner ride offer and incoming requests (illustrative guide).

1. Open **Partner** from the navigation menu.
2. Enter the starting point and destination.
3. Complete departure details and available seats, where requested.
4. Review the information carefully.
5. Select the publish/offer button.
6. Review incoming requests and respond using the available controls.

Partner color theme: Orange accents distinguish the Partner area from the Rider area, which uses green accents with a white background.

6. Review trips, payments, maps, and profile

My trips
Open this section to review trip records or status information displayed by the website. If no trips appear, confirm that a ride or request was successfully created.

Payments
Use this area to review any payment details shown. Do not assume that a payment has been processed unless the website clearly confirms it. A production payment workflow requires secure server-side processing and a payment provider.

Maps & Location
Open the map/location section and allow location access only if you want the site to use your device location. If the map does not load, check your internet connection and whether the required map API/configuration is present.

My profile
Open the profile section to review account details and available security options. Use a strong, unique password

and never share your password or OTP with another person.

7. Troubleshooting

Problem	What to try
Cannot log in	Check your USN and password, confirm the account was created, and retry. Use password reset if configured.
Account form will not submit	Check required fields, use a 10-digit phone number, and verify the email format.
New request is missing	Confirm submission, check for validation messages, and refresh the page once.
Map does not appear	Check internet access, browser location permission, and map API configuration.
Changes do not show on GitHub Pages	Confirm the correct index.html was committed, wait for deployment, then hard-refresh the page.

8. Important notes and limitations

• This manual is based on the supplied CampusRide HTML prototype and the visible interface sections.
• The screenshots included are simplified illustrative interface guides, not live captures from a running deployed website.
• A static HTML page can save data locally in a browser, but that does not automatically synchronize data between students or devices.
• Shared accounts, cross-device ride requests, secure authentication, OTP delivery, payment processing, and persistent records require appropriate backend services and security controls.
• Never upload passwords, API secrets, or private student data into a public repository.

Quick checklist

■ Log in or create an account.
■ Use Rider to submit a ride request.
■ Use Partner to publish a ride offer and review requests.
■ Check My trips and Payments for available information.
■ Use Maps & Location only with the required permissions.
■ Log out when using a shared computer.

CampusRide — Student mobility, made easier.
